EDUCATION

Bachelor of Design
Minor in Marketing
FLAME University
2023 - 2027

A Level
Cambridge International
VIBGYOR High School
2018 - 2023

CORE SKILLS

- Agentic AI Workflows
- AI-Assisted Design
- Prototyping
- Systems Thinking
- Design Systems
- Interaction Design
- Circuit Design
- Physical Computing
- Embedded Interaction

TOOLS

Design

Figma, Fusion 360, Adobe Suite, Blender

Agentic AI Software

n8n, Claude Code, Microsoft Copilot Studio

Development

React, TypeScript, Vite, Tailwind

Programming

Python, YOLOv8, Arduino IDE

Hardware

ESP32

APIs

Firebase, Gemini, Calendar

SUMMARY

I'm a fourth-year Bachelor of Design student at FLAME University, focused on building agentic AI systems and AI-powered automation. I'm interested in how intelligent agents can reason, use tools, and take action to solve real-world problems.

My work centers on designing and building agentic AI systems, supported by a background in UI/UX, product design, and physical computing. I focus on creating practical, intuitive AI experiences that move beyond interfaces to actually get things done.

EXPERIENCE

AI Agent Development Intern

Bajaj Finance Limited – Agentic AI Unit | May 2026 – Jul 2026

- Worked on HR Genie, a conversational AI agent in Microsoft Copilot Studio integrated with Bajaj's internal HRMS (CHROMA).
- Automated leave, reimbursement, and document retrieval workflows for employees.
- Proposed moving the team from Copilot Studio Gen 1 to Gen 2; built the proof of concept, pitched it to leadership, and migrated 17 sub-agents in the trial they approved.
- Worked across Copilot Studio, Power Fx, and Azure API Management (APIM) integrations.

UI/UX Intern

RAHI Platform Technologies | Jul 2025 – Aug 2025

- Contributed to Version 2 of RAHI's design system.
- Improved component consistency and structure for scalable product UI.

PROJECTS

ClassFlow Agentic AI | Creator & Developer

- Built a scheduling system that converts chat prompts into structured class calendars.
- Implemented authentication and database persistence using Firebase Auth and Firestore.
- Designed conversational UI flow to simplify schedule creation and editing.

Revela Tangible Interface

- Co-created a screen-free embedded device for children aged 4 to 7, providing proximity-based feedback using light.
- Engineered a wand and beacon system utilising ESP32 modules and NeoPixel LEDs.

ETSConnect Business Design | B2B Platform

- Reframed a corporate mobility operator's growth brief through market sizing, two field visits, and seven buyer-side interviews.
- Designed a B2B procurement marketplace connecting verified corporates with employee-transport providers, validated with an HCL transport manager.

The Soundtrack of Seven Years Data Visualization | Spotify

- Built a Python pipeline that turned 12 Spotify export files into 98,111 verified streams, with every figure re-checked by an independent script.
- Designed and shipped an eight-chapter scrollytelling data story with custom SVG charts, as a single offline HTML file.
